

# DRIVING TRANSFORMATION IMPACTFUL COMMITMENT

2023 INTEGRATED ANNUAL REPORT

**COMPLEMENTARY DATA** 

# Content

This document presents a summary of the most relevant quantitative and qualitative indicators in the management of Arca Continental's priority issues in alignment with the main international reporting frameworks through which the organization measures and evaluates its Environmental, Social and Corporate Governance performance.

Environmental <b>Leadership</b>	Positive <b>Social Impact</b>	Economic Empowerment
Circular Economy	Talent Management	Sustainable Sourcing
Water Stewardship	Consumer Preferences	Multi-sector Collaborations
Climate Action	Community Development	Small Business Support
Other environmental aspects		Other economic and corporate governance aspects

# Environmental **Leadership**

<sup>&</sup>lt;sup>1</sup> In the independent verification by a third party, the total weight of the purchased packaging was validated without considering the breakdown of recyclability.

<sup>&</sup>lt;sup>2</sup> During 2023, the goal was to acquire more than 35,000 tons of recycled cardboard.

<sup>&</sup>lt;sup>3</sup> During 2023, the goal was to acquire more than 31,000 tons of recycled aluminum.

<sup>&</sup>lt;sup>4</sup> During 2023, the goal was to acquire more than 60,000 tons of glass of recycled origin.

<sup>&</sup>lt;sup>5</sup> During 2023, the goal was to acquire less than 230,000 tons of plastic virgin (all type of plastics).

Recycled waste	Ton	1,312.68	1,661.12	3,483.54

<sup>&</sup>lt;sup>6</sup> The food waste reported corresponds to the losses of inputs used in the production process of Arca Continental products, most of which represent sugar and other sweeteners. In 2023, the internal goal was to limit food loss and waste to 7,000 tons, reach a volume of loss and waste used for alternative purposes of 6,600 tons, and achieve a revalued food intensity of 10%.

<sup>&</sup>lt;sup>7</sup> Of the 7,096 tons of food loss, 82 tons correspond to the loss generated in the beverage operation due to the use of sugar and 7,014 tons correspond to raw materials to produce snacks.

<sup>&</sup>lt;sup>8</sup> The company carries out internal audits to reduce industrial waste generated by operations. The audits consist of in-person visits through which the technical and environmental teams validate that good waste disposal practices are being implemented, following the guidelines established by the corporate and ensuring local regulatory compliance.

 $<sup>^{\</sup>rm 9}$  In 2023, the goal was to generate less than 150,000 tons of waste.

<sup>&</sup>lt;sup>10</sup> The sum between recycled and final disposal waste would not be equal to that generated because the suppliers in charge of collecting said waste have routines or frequencies that vary and do not exactly match the dates on which the operations generate them.

14 production centers of Arca Continental's operations in Mexico have current certification of "Zero Waste" operations. Program held in conjunction with the Coca-Cola Company through which actions are promoted to properly manage waste, its disposal and valuation, thus minimizing the amount of waste generated by operations.

Withdrawal by source in Production Centers <sup>16</sup>	Thousands of m3	28,754	26,313.0	26,151.1

<sup>1.4</sup> 

<sup>&</sup>lt;sup>14</sup> In 2023, the goal was to consume less than 15,300,000 m3 of water, considering the business growth in production volume of 4.3% and a 1.5% improvement in efficiency in the use of the resource.

 $<sup>^{15}</sup>$  Water withdrawal by source is expressed in terms of thousands of m3. 1000 m3 = 1 Mega liter.

<sup>&</sup>lt;sup>16</sup> In the total water extraction, the attributable water would be subtracted, thus obtaining the extraction of 28,745.4 thousand m<sup>3</sup>

<sup>&</sup>lt;sup>17</sup> Distribution Center data was not validated by an independent third party.

<sup>&</sup>lt;sup>18</sup> Data outside the scope of verification by an independent third party. The recycled water is used for different purposes such as donating water to educational institutions for watering gardens. The water that is recycled is taken for different purposes of own use depending on the level of treatment. For example, less treated water is used for own irrigation or for complementary services such as use of bathrooms. When it has a tertiary or quaternary treatment it can be used for auxiliary services such as cooling towers, boilers, etc. At the Hermosillo operations, quaternary treated water is used for industrial washing of returnable bottles.

<sup>&</sup>lt;sup>19</sup> Arca Continental remains committed to treating the water it uses. As part of the strategy to achieve this commitment, more ambitious treatments have been sought, moving from secondary to tertiary. In 2023, investments were made to even carry out quaternary treatments with the intention of improving the quality of water discharges.

 $<sup>^{20}</sup>$  Water discharge data by destination are in thousands of m3. 1000 m3 = 1 Mega liter.

Low-carbon products				

As part of its strategy to reduce emissions and contribute to the circular economy, Arca Continental is committed to the objectives set out in the World Without Waste initiative. In these goals, Arca Continental is committed to incorporating 50% recycled material in all its primary packaging before 2030, the percentage of recycled PET and food grade bio PET in the packaging of the entire company in 2022 was 23.6%. As of 2021, all 20 oz contour bottles of Coca Cola and Dasani in the US, all San Luis beverage presentations in Peru and all Ciel presentations (except jug and mineral version) were made with 100% rPET. The sale of these products represented approximately 14.83% of the total sales volume in 2023, avoiding the emission of 13,799.21 tCO2e.

Additionally, through the packaging innovation team, the company carries out pilot tests to reduce the amount of virgin material used for the primary or secondary packaging of the products, as well as to eliminate unnecessary packaging elements and reconfigure the presentation of the products. All this, with the intention of reducing the amount of virgin material used in primary and secondary packaging. During 2023, these tests made it possible to avoid the use of more than 47 thousand tons of virgin resin, equivalent to 5,545 tCO2e.

In 2023 we installed 89,188 cold drink equipment with greater energy efficiency rate and more friendly to the environment because it uses a less harmful refrigerant gas to the atmosphere. This initiative helps the clients of Arca Continental (who use that equipment as point of sell of the products) to use less electricity and avoid CO2 emissions, with the investment in more efficient equipment's, Arca Continental helped the avoidance of 39,220 tCO2e of their clients.

#### **Financial opportunities of Climate Change**

AC have a universal bottle, a family-sized container that can be exchanged for another drink of the same size from the Coca-Cola family of any flavor to facility its returnability in Mexico, Argentina, Ecuador and Peru in order to strengthen their multiple-use model. In Argentina, returnable bottles represented 38.6% of the whole portfolio beverages sales, while in Mexico it represented a 29.4%, in Ecuador 28.8%, and in Perú a 24.8%. Additional lines were launched in reuse models in 2022, including Valle Frut Frugos Fresh, among others. During 2022, AC had 34% of the total volume of returnable sales in Mexico to the universal bottle in 12 production lines, enhancing recyclability. Every time two of these containers are used contributes to 80% of the virgin material being saved.

AC is constantly evaluating market opportunities to expand the Universal Bottle initiative to increase their refillable/non-refillable ratio. To achieve this, the team has mapped out 8 lines that will enter a reuse model by 2025. To make the reuse model attractive to clients and customers, commercial teams introduced a "returnable membership" with clients and the application of promotional codes, both would be managed through digital platforms and will help with the introduction of refillable packaging to the market. To measure the initiatives' effectiveness, the returnable mix, client conversion, client number and purchase frequency would be monitored. The financial impact figure corresponds to 51% of insured sales, taking as a reference the 24% of returnable sales that occurred in 2022. This represents benefits of more than 1,486 million MXN and costs of more than 38 million MXN.

Annually, training on environmental issues is carried out for technical operations teams. In these sessions, the main commitments and goals related to issues of water security, climate action and circular economy are shared. In addition to how they can contribute to the fulfillment of these goals and what the tools are to ensure it. Among the topics addressed are: i) Practices for water efficiency and energy consumption, ii) Adequate management and use of industrial waste, iii) World without waste, among others

**Biodiversity Analysis** 

 $<sup>^{30}</sup>$  Significant fines or penalties are identified as those that exceed USD 10,000.

Before constructing an operational or distribution center, we conduct environmental impact assessments with biodiversity protection criteria. We ensure that operations are not built in UNESCO listed or IUCN-listed protected natural areas or mega-diverse areas. In the last five years, we conducted an environmental impact assessment at the North Point operating center with a total area of 182,958 m2, and at three operating centers in Mexico with an area of 38,487 m2. These sites are located on properties with industrial land use.

A biodiversity risk assessment analysis aligned to TNFD is being carried out in 2024. From this analysis, the level of exposure of Arca Continental's operations to risks related to biodiversity will be identified. Initially, the analysis is focused on physically auditing the 5 largest beverage production centers in Mexico and the other beverage business production centers in this same country will be analyzed remotely.

From this Assessment, specific commitments can be defined and concrete mitigation actions established to promote the company's environmental leadership.

#### Talent development model

The talent development model, also known as Talent Management Review (TMR), allows Arca Continental to identify talent based on their potential and average performance, to define possible successors to higher positions. Collaborators with leadership, management and management positions who have been in their current position for at least 6 months participate in this process. New employees or employees who have changed their position in a period of less than 6 months, when starting the TMR process, will be identified as TNTR (too new to rate). In this model, collaborators are categorized through the 9box system where participating collaborators can be classified according to their potential and performance:

- Potential: evaluates the ability and willingness to respond quickly and effectively to diverse, adverse, changing and ambiguous assignments.
- Performance: reviews the ability to achieve expected results consistently over time. (results obtained in the performance management process)

This model allows you to identify high-performing collaborators who could be successors to the position of their direct bosses. To identify these successors and rank them, their level of preparation and potential is considered, considering skills, knowledge, professional experience and personal characteristics.

#### Performance evaluation process

At Arca Continental, performance is evaluated through the fulfillment of organizational objectives aligned with the strategic objectives of the business of the collaborators who are in positions from coordination to executive management. The performance appraisal cycle consists of five main phases described below:

- 1. **Alignment and definition of objectives:** in this phase, the strategic priorities of the organization are considered to define annual objectives that contribute to their fulfillment based on the SMART methodology. These objectives are validated together with the immediate boss.
- 2. **1st feedback:** In the second quarter of the year, there is a first feedback space where the direct manager evaluates the progress that has been made in terms of meeting the objectives defined in the first phase.
- 3. **Change of objectives:** After this feedback, at the beginning of the third quarter there is a window to rethink objectives in case there is some factor external to the collaborator that prevents them from achieving them in the established time.
- 4. **2nd feedback**: in the third quarter of the year there is this space where the direct boss shares the results of the Talent Management Review evaluation, where other teams share feedback on the employee's performance and they are categorized at some level depending on their performance in technical aspects and management of soft skills.
- 5. **Evaluation and final feedback:** this session occurs at the end of the year, the employee performs a self-evaluation where he indicates the level of compliance with his objectives and the direct boss in turn also provides a rating. In this space, formal feedback is given on the employee's performance, common objectives are established to improve the following year's performance, and next steps are agreed upon to advance in the year to come.

Furthermore, aware that the success of a team depends on the members' ability to communicate, the company promotes other feedback channels between leaders and team members, such as one-on-one conversations:

- **One-on-one conversations:** they are a relevant moment of agile conversations in which, through honesty, empathy and adaptability, spaces are fostered where both express themselves freely, safely and confidently on various personal topics, as well as goals, aspirations, etc. others. The purpose of the sessions is to obtain feedback, build trust, motivate and empower employees, improve the work environment and promote adaptability and resilience. These goals are achievable when 1-on-1 conversations are part of the team's daily habits and culture.

Occupational Safety Goals					

Arca Continental has goals for Occupational Safety indicators and for compliance with the global safety strategy.

- **Indicators:** an annual objective is defined at the plant level for the number of LTI events and total incidents, these are defined hand in hand with each of the operations seeking reduction for each of the sites based on their performance in the last years.
- Strategy: Call to Action, security events that occur in the Coca-Cola system, are monitored and shared with 100% of our employees as learning, preventing a similar incident from occurring within Arca Continental. This monitoring is done weekly with each country leader. Operations are also monitored for their adherence to Non-Negotiables, a list of security elements that all sites must comply with, related to Machinery Security, Route to Market and Safe Yard.

For this, there are monitoring routines and monthly reports where progress is measured, actions taken by each country, as well as the results vs. the stated objective.

In these routines, not only personnel from the security area participate, but also these reports are shared with all the country technical directors and global directors of Arca Continental, thus generating visibility for all the organization's leaders on security issues. and Occupational Health.

### **Occupational Health and Safety Audits**

Arca Continental's operations have an audit program based on the Coca-Cola requirements (KORE) that establish the aspects that must be met to make its operations a safe work area. If findings of non-compliance are found in these audits, the site must create an action plan to address these opportunities, which is followed up by the corporate area.

On the other hand, Risk Assessment audits are carried out through the corporate team and country teams. In these reviews, the processes in which security events have occurred are validated. In the opportunities found, we work with the site to define an action plan and follow up with periodic on-site reviews to verify that the opportunities are addressed to prevent risks.

In addition to the above, we have also worked hand in hand with Coca-Cola to carry out audits together with the corporate, country staff and site personnel to work on the alignment of criteria and approach of Arca Continental and the system.

### Health and Safety in contracts with Suppliers.

The Occupational Health and Safety area has worked with operations to include safety aspects in supplier contracts. Area continental requests as part of its global security strategy that all companies that provide services must have security clauses in their contracts.

 $<sup>^{39}</sup>$  Refers to the number of lost-time injuries that occur per 200,000 hours worked.

 $<sup>^{40}</sup>$  The LTIR of contractors was not verified by an independent third party.

Among the aspects included in these contracts are the Rules that Save Lives, compliance with KORE 3.0 standards, development of risk assessment and application of controls in accordance with the hierarchy of controls, compliance with the working day, trained personnel to supervision of dangerous jobs, among others. This initiative has been worked hand in hand with the Engineering and Manufacturing team, with the final intention of delimiting all the aspects with which the contractor must comply in order to provide services to the company.

#### **Supplier Evaluation Process**

For a supplier to be considered as an option to work with The Coca-Cola Company or any of the bottlers in the system, it is necessary that they commit to compliance with the Supplier Guiding Principles. To ensure alignment with the system, critical suppliers are audited from time to time.

Likewise, as part of a due diligence process, suppliers are evaluated in economic, social and legal compliance aspects through the purchasing process carried out through SAP Ariba, which is complemented by the legal compliance evaluation. that Arca Continental carries out with Nexis Dilligence, this platform allows us to identify risks that may be related to compliance with environmental, social, and human rights issues, among others. Additionally, the company evaluates suppliers' compliance based on the EcoVadis evaluation, which allows identifying success cases and opportunities for improvement to continue moving forward.

In terms of Human Rights, 100% of the suppliers evaluated in the last 3 years through EcoVadis have also been evaluated in terms of compliance with Human Rights management. Of this 100%, only 0.6% of suppliers identified risks related to Human Rights issues. At this time, no mitigation actions have been reported in this regard.

In the case of suppliers of agricultural ingredients, the supply team carries out visits to monitor compliance with commercial, legal and sustainability practice aspects, always seeking to identify opportunities for continuous improvement.

Likewise, the company collaborates closely with its suppliers to implement projects that promote the adoption of sustainable practices. For example:

- Lightening of containers: tests are carried out together with plastic bottle blowing suppliers to identify the optimal way to reduce the plastic content used in packaging, seeking to reduce the amount of post-consumer waste, Scope 3 GHG emissions by use of packaging and promoting circularity.

- Truck conversion: we collaborated with a supplier dedicated to the manufacture and sale of transport vehicles, taking advantage of the talent of Arca Continental's engineering team to develop capabilities in the supplier that allowed it to convert a conventional combustion truck into an electric truck. With this, we sought to establish a pilot test that could promote the reduction of emissions due to fuel consumption in the fleet.

### **Supplier Guiding Principles**

The Supplier Guiding Principles are part of all contractual agreements between The Coca-Cola Company and Arca Continental's direct and authorized suppliers. Arca Continental expects its suppliers to develop and implement adequate internal business processes to meet expectations. TCCC together with AC closely monitor the implementation of the Supplier Guiding Principles<sup>48</sup> by using independent third parties to evaluate supplier and bottler sites.

#### **AUDITS AND EVALUATIONS**

To do this, they partner with a select number of accredited audit firms and conduct training on a regular basis to ensure they understand and align with their program requirements. The Company relies on the Association of Professional Social Compliance Auditors (APSCA) to guarantee a common accreditation for auditors and audit firms. Auditors carry out documentary and in-person evaluations through site visits to validate suppliers' compliance with the principles.

Suppliers are evaluated prior to starting their commercial relationship with the company and are re-evaluated at least every two years or every year (the latter in the event that any non-compliance with the principles is determined and in order to ensure their alignment with them). . Since the inception of the SGP program, TCCC has collaborated to complete more than 30,000 human and labor rights assessments and more than 2,500 audits are conducted annually. These audits are a vital human rights due diligence instrument for the company and the system.

#### CONTINUOUS MANAGEMENT

New suppliers must demonstrate compliance with the SGP prior to being authorized as an approved supplier. The Company reserves the right to terminate an agreement with any supplier who cannot demonstrate compliance with the GSP requirements. However, this should be considered a last resort. Walking away from problems does not ultimately solve the problem or improve the situation for affected communities and stakeholders. Instead, aligned with the UN Guiding Principles, they aim to collaborate with other major buyers to increase leverage on suppliers to engage. The program is always evolving as we continue to learn and address new challenges. AC regularly consults with stakeholders and benchmarks against industry standards and peers in organizations such as AIM-PROGRESS and the Consumer Goods Forum to improve our program. As such, the Supplier Guiding Principles are reviewed and updated as necessary.

# Supplier evaluation through EcoVadis

<sup>48</sup> Arca Continental, as a commercial partner of The Coca-Cola Company, is also evaluated for compliance with the Supplier Guiding Principles. In these evaluations, possible risks regarding respect for Human Rights are analyzed. At this time, no Human Rights risks have been identified in any of Arca Continental's operations.

EcoVadis provides a sustainable performance evaluation service for companies, through a global platform. The rating obtained when evaluated by EcoVadis considers the impacts of the environment, labor practices and human rights, ethics and sustainable purchases. Each company is evaluated on the material aspects corresponding to the size, location and sector to which it belongs.

The results of these evaluations are presented on easy-to-read evaluation sheets that provide scores between zero and one hundred (0-100), and depending on performance, medals (bronze, silver and gold) can be awarded to the best performing companies. In addition, the evaluation sheets provide guidance on strengths and areas of improvement that evaluated companies can use to focus their sustainability efforts and develop Corrective Action plans to improve their sustainability performance. The evaluated company can see how its score compares with the values in its sector. Combining scorecard results with areas for improvement causes a "race to the top" in which entire sectors compete for global best practice.

Through its subscription to EcoVadis, Arca Continental has an outsourced sustainability management platform that helps its suppliers: be evaluated, manage their performance and encourage continuous improvement through practical cases, benchmarks and access to training in issues associated with the aspects in which they are evaluated. In this way, Arca Continental together with The Coca-Cola Company and other bottlers in the system encourage their suppliers to adopt sustainable business practices.

Likewise, information on supplier performance along with their willingness to improve this performance year after year by incorporating suggested measures to improve their performance drives Arca Continental to make more sustainable purchasing decisions. To date, AC through EcoVadis has evaluated more than 220 critical suppliers, reducing risks for some of the largest organizations in the world and positively impacting environments, promoting transparency and driving innovation.

Emerging Risks	
Risk name	Description of the risk and its potential impacts
Scarcity of water in agricultural areas to produce ingredients (sugar, juices, corn, bananas, potatoes,	In Mexico, about 70% of the water available for human consumption is used in agriculture for food production; However, around 60% is wasted because the irrigation infrastructure is obsolete, worn out and leaks; also, because there are losses due to evaporation of the irrigation water present in the soil and the inefficient use of this resource, that is, the water used is not fully used.
others).	In agriculture, water scarcity reduces crop yields by between 20 and 50% (Shrivastava & Kumar, 2015), causing slowed growth of the economy, such that, according to the World Bank (2021), in By 2050, economic growth rates could decline by 6% of GDP in water-scarce regions.
	On the other hand, worldwide, water scarcity is a limitation for the production of foods of agricultural origin (Muñoz, 2009) because it increases the risks for production due to the volumes of water necessary for this activity, which differ depending on the product; For example, for the production of fruits and vegetables such as a tomato, a potato, an orange and an apple, 13, 25, 50 and 70 liters (L) of water are required respectively.
	Currently, water scarcity is evident because the amount of precipitation or rainwater is less than the extreme limit in arid areas (350 mm), due to the waste of about 57% of irrigation water due to the infrastructure with which it is account is obsolete or in poor condition (worn, broken and/or leaks), as well as losses due to infiltration and evaporation of water stored for agricultural use, which amount to 60%, due to the fact that when the water reaches the ground (Maguey, 2018), this can infiltrate or enter very deep soil layers where it cannot be used by plants, or it can evaporate and pass from the soil surface to the atmosphere.
	The impact that this emerging risk can bring to Arca Continental is an increase in price of ingredients, lack of ingredients, loss of sales, impact on logistics and increase in transportation costs when bringing ingredients from more remote areas, having to change formulations. due to lack of sugar in drinks.
	As part of the mitigation actions to address this risk, Arca Continental has defined a global strategy to promote water security with four main lines of action: guarantee the responsible use of water in its operations, deploy actions to conserve sources of water from the areas surrounding our operations, promote water culture and guarantee access to safe water for the people who live in the areas where we operate.
	In this way, the company proactively seeks to reaffirm its commitment to the preservation of the resource. To learn more about mitigation actions, you can consult the 2023 Annual Report on page 65.
Lack of electrical energy capacity at the national level.	A risk that is rising in priority in Mexico is the interruption of electrical energy in various states of the country, due among other things to the lack of investment and maintenance of the electrical generation and distribution systems combined with increases in temperature throughout the territory. national.

This risk will increase since to increase the installed capacity in generation it takes 5 to 7 years of investment and infrastructure and currently there is an extra capacity of no more than 10% and there is an annual increase of 6% in consumption, to this We must add the effect of nearshoring, environmental factors among others, which is why it is not predicted to be resolved in the short-medium term.

Ecuador is going through a production crisis from hydroelectric dams, which are the main source of electricity, causing blackouts of up to 8 hours. The extension of the drought, the increase in climatic temperatures, the lack of maintenance of the entire electrical system infrastructure in previous years and the presence of historically minimum flow levels have caused all available generation plants to be activated.

The impact that this emerging risk can bring to Arca Continental, in addition to operational continuity in production, is the increase in losses for dairy products, additional costs when having to operate own or rented electrical generators in production centers, not being able to operate on a night shift in Distribution Centers that do not have generators impact customers by breaking the cold chain (dairy products).

Among mitigation actions, Arca Continental promotes the adoption of good practices for the use of electrical energy that are validated through internal audits that seek to ensure its efficient use. Additionally, within its long-term plans, the company considers the use of renewable energy sources to guarantee supply in the midst of energy crises.

# AI/Cybersecurity with the digitalization of suppliers.

The modernization of agriculture and suppliers in livestock farming increasingly lead to the need for digital interaction with Arca Continental, however, the lack of controls of these suppliers in digital systems means that they could affect the production chains of raw materials. key like sugar or milk.

The impact that this emerging risk can bring to Arca Continental is a cyber-attack with an impact on the paralysis of the supply chain, reputational or Ransomware to the business.

In order to prevent possible technological impacts, the company has a cybersecurity management system described in the following link: <a href="https://www.arcacontal.com/media/395959/information\_security\_-cybersecurity.pdf">https://www.arcacontal.com/media/395959/information\_security\_-cybersecurity.pdf</a>

<sup>&</sup>lt;sup>52</sup> Regarding training on discrimination and harassment, during 2023 we implemented the With Respect We Win All program, an initiative that aims to guarantee that all AC employees understand the behaviors to encourage, relearn or avoid, in order to make respect an element distinctive of our organizational culture. In addition, the training we carry out on the Code of Ethics for all company workers includes guidelines on how to act in situations of discrimination, harassment or abuse.

#### **Board of directors**

#### Attendance at board meetings

During 2023, there was 99% council attendance. Depending on the type of matter that will be addressed during the sessions, a minimum attendance at Council meetings is established as mentioned below.

Matter	% of minimum attendance required
Special majority matters	75%
Supermajority matters	60%
Simple majority issues	55%

#### **Management Ownership and CEO Compensation**

Currently only 1 executive director owns shares, which in multiples of his base salary represents an average of 52% ownership. To calculate the base salary, we use the following considerations:

- Total annual salary (excluding all bonuses, pension benefits and fringe benefits)
- C-suite average total annual compensation is the total average salary of our senior management team

For confidentiality reasons and for the safety of our CEO and other executive directors, we decided to disclose our average total annual C-suite compensation through our response to S&P Global's CSA, rather than our CEO's total annual compensation or the compensation of specific CEOs who owned shares in 2023.

No government institution owns shares in the organization and, therefore, the government has no voting rights. We have a compensation ratio for our C-Suite of 35 compared to the average compensation of Arca Continental employees.

## Main shareholders of the company

The main shareholder of AC is the Control Trust, with a total of 821,744,424 shares that represent 48.3894% of all of AC's outstanding shares. To the best of the Company's knowledge, except for the Control Trust, no natural or legal person directly owns or is a beneficiary of more than 10% of the shares representing AC's capital stock.

Based on the foregoing, the Company considers that, except for the Control Trust, no physical or legal person, individually, exercises major influence or command power in the Company. Except for Mr. Juan M. Barragán Treviño, Ms. Samira Barragán Juárez de Santos, Ms. Magda Cristina Barragán Garza, Ms. Cynthia H. Grossman and Ms. Marcela Villareal Fernández, no other member of the Board of Directors of AC or relevant executive, is, individually, a shareholder or beneficiary of more than 1% of AC's share capital.

To the Company's knowledge, no officer of the Company owns 1% or more of the shares representing AC's capital stock. In the last 3 years there have been no significant changes in the percentage of ownership held by the Company's main shareholders.

### **CEO Compensation Metrics**

The Board of Directors approves the proposals generated by the Human Capital and Sustainability Committee so that the Company has adequate compensation policies. The functions related to human resources delegated to the committee are:

i. Evaluate and submit to the Board guidelines so that the Company has adequate compensation and human resources policies.

- ii. Propose to the Board the criteria for the selection of the CEO and the main officials of the Company.
- iii. Make recommendations to the Board on the criteria for evaluating the CEO and high-level officials of the Company.
- iv. Review executive compensation schemes and make recommendations on the structure and amount of executive compensation.
- v. Review that the conditions for hiring executives and that payments for separation from the Company adhere to the guidelines of the Board.

The Company's remuneration criteria are based on the following principles:

- Focused on the execution of a business strategy with a long-term vision.
- Aligned between the interests of management and shareholders.
- Capable of influencing the management team and the organization to improve their performance.
- Challengers in defining the threshold for achieving objectives.
- Adhered to the legal and regulatory framework, as well as best practices.

The following table shows a summary of the remuneration criteria and their application to our CEO.

Key principle	Application to policy	Current implementation
Focus on strategy execution	Annual bonus aligned to business KPIs	Annual bonus metrics
	_	EBITDA (20%), Net Profit (7%), Net Revenue (9%), EBIT /

thresholds		

### Incentives aligned to sustainability

In 2023, there were variable compensation schemes aligned to sustainability in 1,241 objectives of employees in positions ranging from coordination to executive management. These schemes are 100% linked to our sustainable business strategy and the increase in variable compensation is calculated based on performance and the achievement of goals related to 5 priority initiatives:

- 1. Manage and mitigate transformational risks (water, waste, value chain and portfolio) through a comprehensive plan in each of the territories we serve, as well as its adequate management in the event of incidents or crises (IMCR).
- 2. Improve sustainability performance by deploying a sustainability framework of operational committees per country, which allows us to execute priority projects to improve our performance, promote community development and protect the environment.

<sup>&</sup>lt;sup>53</sup> Long-term variable compensation is an incentive targeted to our CEO, Level 1 Executive Directors, and Country Directors. It consists of compensation for three years worked consecutively that is paid for all three years.

- 3. Mitigate reputational and regulatory threats to water and waste, through community projects in priority sites according to the risk matrix, establish alliances with interest groups and ensure its positioning with key audiences.
- 4. Strengthen the corporate reputation framework with an emphasis on sustainability communication in the digital space and specialized audiences, with an approved annual communication plan per country to address local priorities and AC positioning.
- 5. Protect the social license to operate and avoid discriminatory regulations with a comprehensive Public Affairs strategy, in coordination with external organizations, community alliances and local plans, which generate a dialogue with sectors of society and authorities.

Below, we present the number of collaborators and objectives aligned with sustainability.

Number of objectives aligned with sustainability Collaborators with incentives aligned with sustainability.

Organizational Level	Number of objectives aligned with sustainability	Collaborators with incentives aligned to sustainability
Entry-level	55	28
Coordinators	700	336
Head of departments	295	151
Managers	146	54
Management/Executive Management	45	17
Total	1,241	586

Arca Continental has climate-related incentives that are granted to executive directors, as well as the managers of each plant and the environment and sustainability teams at the corporate, country and plant levels. These objectives are linked to topics such as improving the operational efficiency of the plants to achieve the organization's GHG emissions reduction objectives, as well as improving climate and sustainability performance in evaluations such as the Corporate Sustainability Assessment, CDP., among others.

The fulfillment of these objectives can affect the short-term bonus or variable remuneration granted to employees, which allows generating a higher level of commitment to the organization's Environmental Leadership strategy and drives continuous improvement at different organizational levels.

 $<sup>^{54}</sup>$  M = male, F = female. 15% of the board is represented by women.

 $<sup>^{55}</sup>$  P = Patrimonial, I = Independent. The board has 30% independent directors.

<sup>&</sup>lt;sup>56</sup> Refers to the number of other external positions in listed companies. Memberships in private companies, educational institutes and non-profit organizations are not considered.

<sup>&</sup>lt;sup>57</sup> Practical work experience" in industry refers to experience gained in employee or executive positions by serving in management, academia, consulting, or research roles.

<sup>&</sup>lt;sup>58</sup> Considering the list of industries recognized by GICS

<sup>&</sup>lt;sup>59</sup> Directors are considered to have experience in Enterprise Risk Management if any of the following conditions were met before becoming Directors: 1) Served as CEO, CFO or CRO, 2) Maintained a senior management position in the financial sector

Material issues for External S	Stakeholders	
Material Issue for external stakeholders	Water Stewardship	Packaging Circularity
Value Chain and Stakeholders impacted by this issue.	Acknowledging the importance of water as an essential resource for life on the planet and as the main component for Arca Continental's products, the company pushes strategic actions and invests in technologies that maintain the appropriate use of water resources while protecting withdrawal sources and contributing to water access for its communities. In this sense, the company recognizes its potential to create a positive impact by ensuring water stewardship in its operations and supply chain.	Arca Continental pays special attention to sustainable packaging designs and proper waste management, considering it essential to comply with environmental responsibilities as a strategic pillar to boost innovation. The company has established an ambitious packaging circularity strategy through which it seeks to positively impact its stakeholders by ensuring the design of sustainable packaging, developing the actors who are part of the recycling chain, and promoting a recycling culture among its customers and consumers. In this way, its actions generate shared value in its operations, supply chain, and through its customers and end consumers of products.
Output metrics and goals	The metrics used to evaluate the progress in achieving the water stewardship strategy are presented in this same document. Among the main evaluation metrics are:  - Water use ratio (Liters of water by liter of beverage produced)  - Water withdrawal in high-stressed areas  - Water discharges treated and water reused	To evaluate progress, the company has adopted the World Without Waste goals established in conjunction with The Coca-Cola Company, whose advancements can be consulted in the Packaging Circularity section of this report and the Integrated Annual Report.
Impact Valuation and metrics	In addition to internal actions to boost efficiency and aware of the importance of protecting the water basins from which water is extracted for production. The company measures the percentage of water replenishment in sites identified as "Leadership Locations", this name signals their potential to lead water efficiency actions and collaborate alongside other stakeholders and foster sustainable water management. Currently, the company has a basin replenishment rate of more than 100% of the water it uses for its own production. This, together with the various collaborations to ensure the well-being of the resource, makes the company lead actions in favor of water security.	Regarding all actions to promote the business's circularity strategy, Arca Continental together with The Coca-Cola Company seek to prevent the leakage of packaging materials into the environment and recover each of the packages that are placed on the market with the intention of create a world without waste. To date, Arca Continental has collected 6 out of every 10 bottles they put on the markets where they have presence. This achievement also means potentially giving each package we sell more than one life by improving their collection to be eventually recycled and reintroduced to the production process once is used.
